To whom it may concern,

Re: **Confirmation of participation for Hitesh Khare**

I am writing to confirm that Hitesh Khare participated in the 2025 Technology Infusion Grand Challenge, an annual challenge organised by the Centre for Technology Infusion.

Hitesh Khare was a member of Team NeuroBloom and their project was titled "Early Age Child Learning Disability Detection using Flexible Wearable Device".

Participation in the challenge, which takes place over the course of 12+ months involves three parts:

Stage 1:

A team of 3-5 members formed. The team must identify a problem relevant to their context and propose a technological solution and submit this online. The submission/entry is reviewed for compliance and confirmation of enrolment at their institution is requested.

Stage 2:

Once fully approved, the team is asked to develop a pitch to the Challenge which is presented via a 3-minute max video. The pitches are sent for judging and those deemed worthy receive an investment of up to AUD\$1,000 to provide funding for the team to build their prototype and test. Team NeuroBloom received an investment of AUD\$250.

Please note the funding provided is based on an estimation of what funding is required to build the prototype, rather than ranking amongst other entries. All teams, including those who do not receive investment, who complete Stage 2, are able to progress to Stage 3.

Stage 3:

During this stage, the teams must build a prototype, test, and refine until a working prototype is completed. They must then create a 3-minute max video to explain the problem and their solution, and demonstrate the working prototype, showing their knowledge, skills and expertise. This video is submitted and judged with a winner and runners up determined. The winning team will receive a 2-week all expense paid mentorship stay in Melbourne at La Trobe University to help further develop their solution for potential commercialisation. Runners up receive cash prizes to be shared amongst team members.

As of today, the winners are not finalised, but I can confirm that Team NeuroBloom have completed all parts of the challenge.

Sincerely,

DJ Heatherich
